

teknion district

teknion

A collection of desks, cabinets, windows and walls, District® offers the look and feel of furniture together with the functional features of systems. Its multi-use components offer a myriad of planning options for any office environment.

Architectural Furniture

District echoes the long, low lines of mid-century modern furniture and, like the design of that era, achieves a remarkable transparency with layered surfaces and a refined scale. District reinterprets the modernist blend of sleek, functional design for the contemporary office.

Efficient Use of Space

District maximizes smaller spaces with products that serve multiple functions. Credenzas and storage support worksurfaces and define space. Overlapping planes and under-surface storage make optimal use of vertical as well as horizontal space.

District has the look and feel of well-crafted architectural furniture. Multi-purpose credenzas support worksurfaces and reduce the need for panel-based planning, preserving the distinctive look of furniture. Layered surfaces and elevated credenzas lend a distinctive transparency, while stacking cabinets and shelves create workstations unique in form and function.

District delivers more out of small spaces. Multi-tiered workstations with overlapping surfaces afford a feeling of spaciousness, and scaled-down versions of traditional storage make optimal use of volume and space within a smaller footprint.

District serves the needs of traditional panel systems while maintaining the design aesthetic of architectural furniture with features such as elevated wall spans up to 96 inches wide. Frost glass windows and screens create privacy while retaining light access. Full-height windows and fascias present a refined, monolithic appearance ideal for corridor applications.

Integration of Livello™ height-adjustable tables with District storage provides multiple surfaces to support different workstyles and tasks. The District stacker top can be used as a standing-height surface or for neighbor-to-neighbor collaboration. Its low credenza surface is ideal for secondary reference materials. The Livello height-adjustable worksurface allows users to work seated or standing.

In design and construction, District workstations are aligned with sustainable principles and with LEED® (Leadership in Energy and Environmental Design) guidelines that stress natural light and air circulation in commercial interiors.

Windows up to 96 inches wide preserve an open, light-filled setting while datum lines at worksurface height reflect an emphasis on more transparent workstations for light and unobstructed views. Elevated panel walls and credenzas permit a healthy air flow beneath and between workstations.

08

01 layering
A four-tier work area is created by layering Desk-Mounted Shelves for above-worksurface storage with worksurfaces that provide cubby areas below, and Low Credenzas that offer a usable surface above an open shelf.

02 stacking storage fascia
Stacking Cabinets offer an optional tackable back panel for added workstation functionality.

03 windows
Single- and Double-Glazed Windows begin at worksurface height or can be added to Panel Walls at varying heights. Add-On Windows (shown) provide continuous glass up to 96 inches wide.

04 organizing trays
Low Credenzas include optional organizing trays that fit inside the drawer to reduce clutter, aid in organization and optimize use of space.

05 inset glass
The Inset Glass blade is embedded in the panel to provide a clean design aesthetic and access to natural light.

06 district foot
The District foot on credenzas offers a 3-inch adjustment range. A level cover maintains a refined design aesthetic.

07 desk edge screen with tackboard
Desk Edge Screens mount on- or off-module to the back or return edges of a worksurface to provide privacy. They can be used with a tackboard for added functionality.

08 angled foot
An angled foot option on storage units enables stand-alone spine applications. The foot offers a 3-inch adjustment range.
